KNIME WORKFLOW CREATION – Activity (Rithika S- 192421211)

Problem Title: Student Academic Performance Analysis Using KNIME

An educational institution wants to analyze student academic performance using KNIME Analytics Platform. Create a complete KNIME workflow using an Excel dataset containing at least 30 student records with the following attributes:

Student_ID, Student_Name, Department, Gender, Attendance, Internal_Mark, Assignment_Mark, Model_Mark, Final_Mark, Study_Hours, Backlogs

Tasks

Create and execute a KNIME workflow to perform the following:

1. Data Import – 10 Marks
   Import the Excel dataset using Excel Reader and verify the data and data types.
2. Data Preprocessing – 10 Marks
   Identify and handle missing values using Missing Value node.
3. Column Selection – 5 Marks
   Select the relevant columns using Column Filter.
4. Attendance Filtering – 10 Marks
   Identify students having Attendance ≥ 75% using Rule-based Row Filter.
5. Total Mark Calculation – 10 Marks
   Create a new column Total_Mark using Math Formula/Column Expressions by calculating the total of Internal, Assignment, Model and Final marks.
6. Average Mark Calculation – 5 Marks
   Create Average_Mark by calculating the average of the four examination components.
7. Performance Classification – 10 Marks
   Using Rule Engine, classify students as:
   Excellent (≥80), Good (70–79), Average (60–69), Poor (<60).
8. At-Risk Student Identification – 10 Marks
   Using Rule Engine, classify a student as "At Risk" if Attendance <75 OR Average_Mark <50 OR Backlogs >2; otherwise classify as "Normal".
9. Department-wise Analysis – 10 Marks
   Using GroupBy, calculate for each department:
   Student Count, Average Attendance, Average Mark, Average Study Hours and Total Backlogs.
10. Sorting and Visualization – 10 Marks
    Use Sorter to arrange students according to Average_Mark in descending order. Create at least two visualizations showing department-wise average marks and performance-category distribution using suitable chart nodes.
11. Final Output – 10 Marks
    Display the final results using Table View and identify:
    - Top-performing students

- Poor-performing students
- At-risk students
- Department with highest average mark
- Department with highest total backlogs

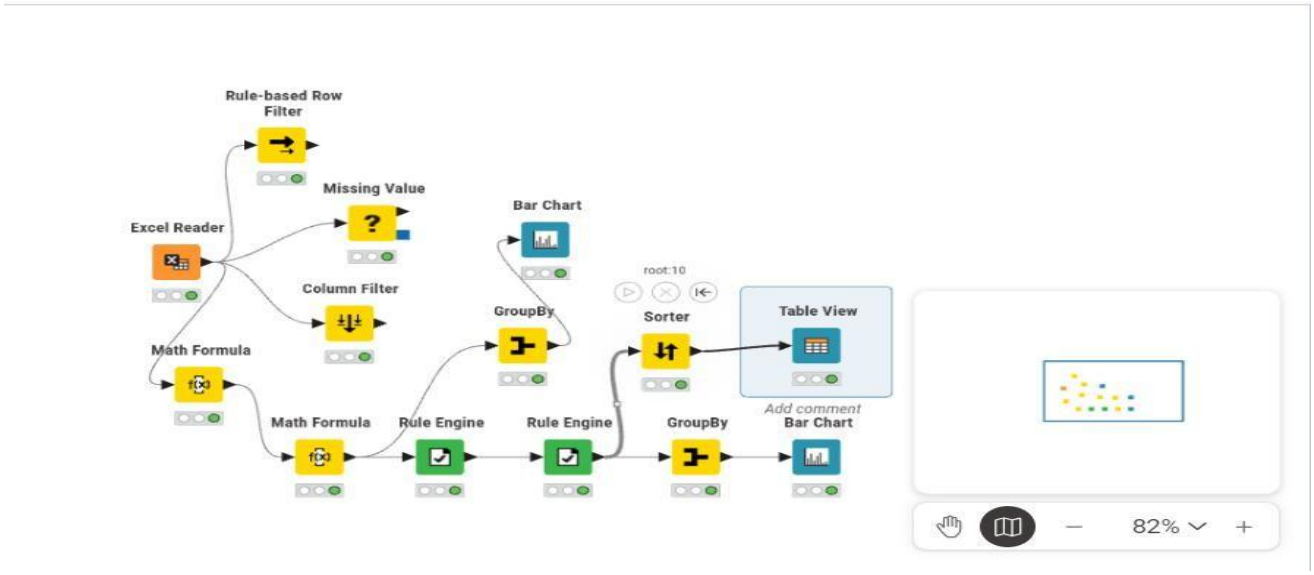

Minimum Required Nodes

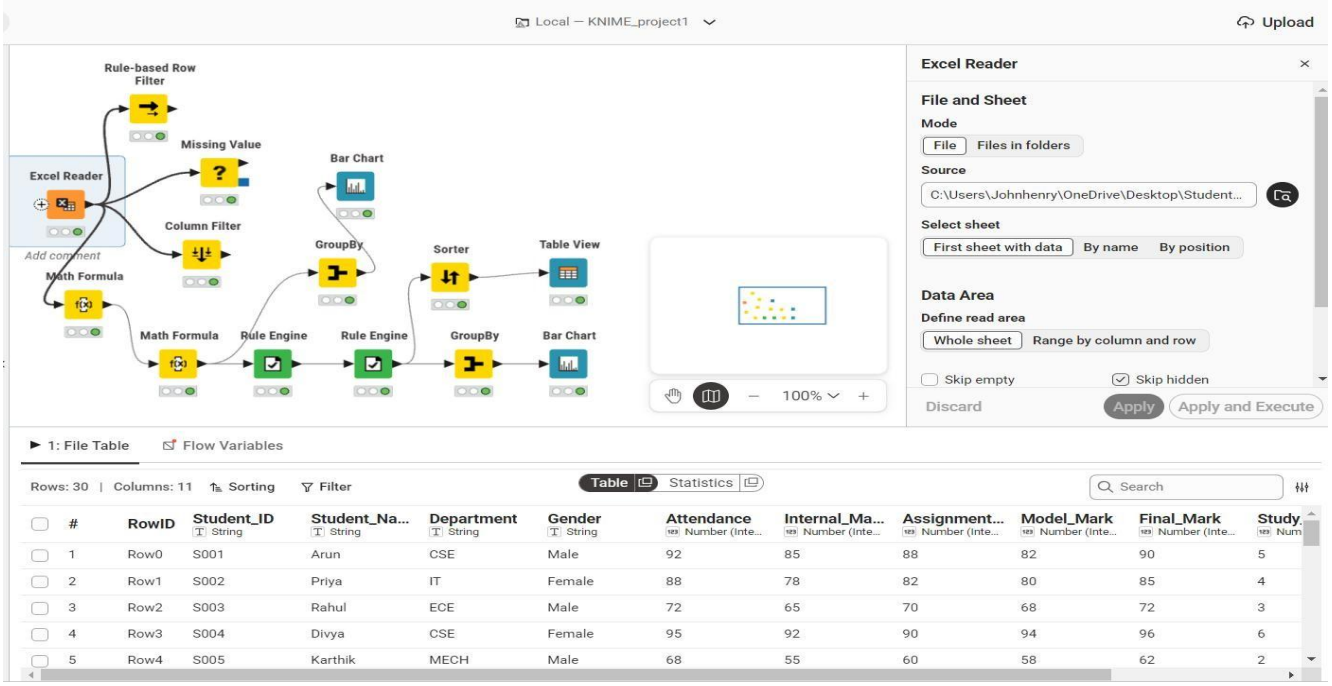

Excel Reader → Missing Value → Column Filter → Rule-based Row Filter → Math Formula/Column Expressions → Rule Engine → Sorter → GroupBy → Chart → Table View

Total: 100 Marks

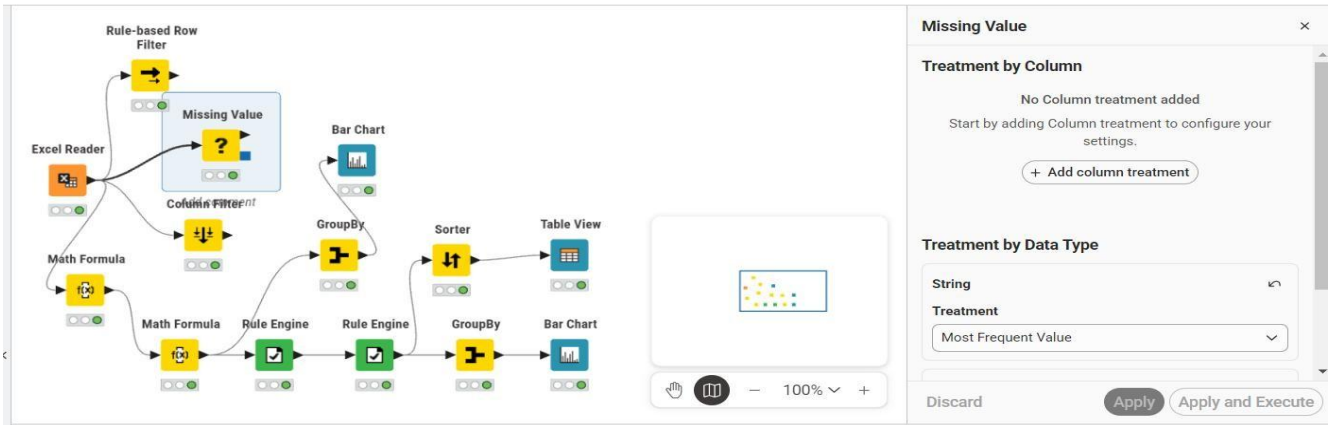

Instruction: Must independently configure, connect, execute and demonstrate the complete KNIME workflow and briefly interpret the obtained results.

OUTPUT:
